

VICENTE VÁZQUEZ RAMÍREZ

FULL-STACK DEVELOPER | PRODUCT ENGINEERING | B2B SOFTWARE

Mexico City, Mexico | +52 55 8036 0896 | vicvaz074@outlook.com
linkedin.com/in/vicvaz074 | github.com/vicvaz074

PROFESSIONAL SUMMARY

Mechatronics engineer and full-stack developer with nearly two years of post-graduation experience building end-to-end B2B products, plus earlier work in simulation and research. I deliver interfaces, APIs, backend services, data, cloud and on-premises deployments, using AI when it adds value. In legaltech, I developed domain knowledge in privacy and personal data protection by translating legal requirements into secure, traceable and auditable workflows.

TypeScript | React / Next.js | Python / Node.js | APIs / SQL | Docker / Electron | Cloud / CI/CD | Applied AI | RBAC / audit

PROFESSIONAL EXPERIENCE

DAVARA ABOGADOS | Full-Stack & AI Developer

Mexico City, Mexico | Nov 2024 - Present

- Own the end-to-end lifecycle of legaltech products, spanning requirements discovery, architecture, interface design, frontend, backend, data, deployment, and production support.
- Designed and developed a 14-module privacy, data, and AI governance platform with RBAC, traceability, audit trails, reporting, and document exports.
- Built an on-premises architecture in which an Electron desktop application connects to Dockerized services and SQL persistence, including installation, logging, and diagnostics.
- Implemented AI assistants and document workflows with OpenAI APIs, vector stores, file search, RAG, OCR, transcription, asynchronous processing, and DOCX/PDF generation.
- Added authentication, validation, error handling, automated tests, CI/CD, and security controls to improve reliability and traceability.
- Work with lawyers, clients, and nontechnical teams to turn regulatory needs into implementable solutions; guided two interns through technical mentoring and code review.

ALTAIR | Simulation and AI Solutions Intern

May 2023 - Jun 2024

- Analyzed customer needs and solution options using RapidMiner, Monarch, and SimSolid, combining technical evaluation with market research.

CTIN - GRUPO CARSO | Mechatronics Research Intern

8-month program

- Held a leadership role in a seven-intern multidisciplinary team, researched emerging technologies, and presented proposals to senior management.

SELECTED PROJECTS AND ACHIEVEMENTS

Autonomous Vehicle and Digital Twin | Project Lead and Lead Programmer | 2024

- Integrated ROS2, Unity, YOLOv8, CAN, sensors, and actuators with Python and C++ components in a six-person team.

Winner, Liverpool Challenge - Tecnológico de Monterrey Hackathon | 2023

- Led the team and served as primary developer for a full-stack chatbot, covering backend logic and the web interface.

TECHNICAL SKILLS

Development: TypeScript, JavaScript, Python, SQL, React, Next.js, Node.js, Express, Fastify, PostgreSQL, and SQLite

Platform, cloud, and AI: Docker, Electron, Azure, Cloudflare Workers/D1/R2, GitHub Actions, CI/CD, OpenAI API, vector stores, file search, and RAG

Quality and security: automated testing, RBAC, audit logging, JWT, OpenAPI, file/data validation, logging, and dependency analysis

EDUCATION, TRAINING, AND LANGUAGES

Tecnológico de Monterrey, Mexico City | B.S. in Mechatronics Engineering, Automotive Specialization | 2020 - 2024

Additional training: Oracle Next Education - Back-End and Front-End | Full-Stack Web Development Bootcamp, UTEL University, 2024

Languages: Spanish, native | English, C1 | French, A2
